SUMMARY

Computer Engineering graduate building across the full stack — from ESP32 firmware running on-device TensorFlow Lite inference up to multi-model AI orchestration in Next.js. Three shipped projects spanning embedded machine learning, a multi-model AI web application and a self-hosted productivity platform, two of them live in production. Two years of hands-on IT support for 10+ clients underneath that, so the hardware and networking layer is not theoretical.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, C, C++, SQL, HTML, CSS
Frameworks	React, Next.js (App Router), React Native / Expo, Tailwind CSS, Prisma
AI & ML	TensorFlow Lite, on-device inference, multi-model fallback orchestration (Gemini, Qwen, Llama, GPT-OSS), Ollama
Data & Infrastructure	PostgreSQL, Supabase, Docker, n8n, NextAuth, Google OAuth, Vercel, Git
Hardware & Networking	ESP32 / Arduino, Bluetooth Low Energy, sensor integration (BME680, SHT31, MH-Z14A), soldering, LAN cabling, network and server setup

PROJECTS

Avocado Ripeness Monitor

2026

Capstone Project · Embedded Machine Learning

- Built an ESP32 WROOM rig reading BME680, SHT31 and MH-Z14A CO₂ sensors, streaming readings over Bluetooth Low Energy to an Expo / React Native application.
- Ran two TensorFlow Lite models on-device — a ripeness-stage classifier and a shelf-life regressor — and benchmarked ESP32-side inference (56 KB tensor arena, fully offline) against phone-side inference; the phone-side design won on error margin.
- Retrained on a merged 1,293-row dataset and validated the app predictions against the Python CLI output value for value.

AI Content Generator

2026

Web Application · Multi-model AI · ai-contentgen-app.vercel.app

- Turns a video, an image or a written idea into ready-to-post captions and teaser visuals in a single pass.
- Chained four language models as caption fallbacks so a rate limit on one provider never blocks the user, plus seven image models with style and aspect-ratio control.
- Google OAuth and Supabase object storage with folder history, pinning and usage analytics — built entirely on free-tier services, at zero API cost.

LifeFlow

2026

Web Application · Productivity Platform · lifeflow-hsa.vercel.app

- Next.js and Prisma over a PostgreSQL instance running in Docker, with NextAuth handling sessions.
- Integrated the Google Calendar and Gmail APIs and pushed reminders through a Telegram bot.
- Built an AI assistant on a local Ollama model that creates, updates and completes items, and confirms before it deletes anything.

EXPERIENCE

Freelance Computer Technical Support

2024 – Present

- Provided remote and on-site support for 10+ individual and small-business clients, resolving connectivity and hardware faults.
- Performed OS reinstalls, hardware upgrades and part diagnostics across desktop and laptop systems.
- Built a repeat client base on fast turnaround and plain-language explanation of technical issues.

Green's Compugadgets Computer Center Corp.

2026

On-the-Job Training

- Diagnosed and resolved hardware and software faults on client printers, desktops and laptops on a weekly basis.
- Handled OS installation and software configuration to reduce repeat service visits.

EDUCATION

Cebu Technological University — Danao Campus

2022 – 2026

Bachelor of Science in Computer Engineering · Sabang, Danao, Cebu

University of Cebu — Banilad Campus

2020 – 2022

Science, Technology, Engineering and Mathematics (STEM) Strand · Banilad, Cebu City

CERTIFICATIONS

TESDA — Computer Systems Servicing · Setting Up Computer Networks · Setting Up Computer Servers

Cisco Networking Academy — Get Connected
